Product Requirement Document

Create a repo for TextCNN model to do review sentiment classification...

Features & Functionalities

- Ability to define and manage model-related settings such as kernel sizes, embedding dimensions, max sequence length.
- Ability to configure model training settings

Technical Constraints

The repository should satisfy the following requirements:

- Supports building modeling frameworks by PyTorch
- Should not use the trainer api of transformers

Usage

To train a model, run the following script:

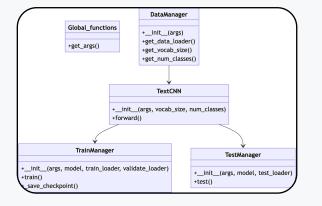

```
python main.py --learning_rate 0.01 --num_epochs 10 \
    --batch size 16 --embedding dim 300 \
    --kernel_sizes 3 4 5 --max_length 50 \
    --save-every_n_epoch 2 \
```

Acceptance Criteria

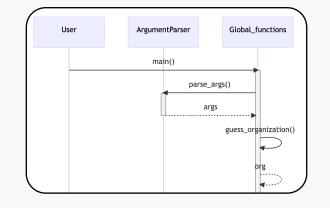

- For train, the mode training logs will be tested if the training loss decreases...
- For test, the terminal output will be tested... The accuracy should be above 0.6

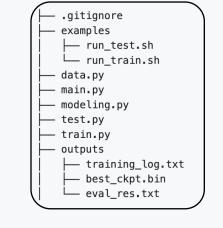

Software Design

UML Sequence

Arch. Design

Dependencies

regs.txt

- 1 evaluate
- 2 datasets 3 scikit-learn
- 4 transformers
- 5 torch

setup shell script.sh pip install -r reqs.txt

```
data.py
 class DataManager(object):
    def __init__(self, args): ...
    def get_data_loader(self) -> Tuple[...]: ...
    def get vocab size(self) -> int: ...
    def get num classes(self) -> int: ...
modeling.py
 class TextCNN(object):
     def get_args(self, args, ...): ...
     def forward(self, inputs) -> Tensor: ...
main.py
                                  setup.py
 def get_args(self, args): ...
                                  test.py
 def main(self) -> Tuple[...]: ...
                                  train.py
```

Testing

Acceptance Testing

```
acceptance_tests/test_train.py
  import unittest ...
  class TestTextCNN(unittest.TestCase):
    def setUp (self) -> None:
    def test_training_metric (self) -> None:
acceptance_tests/test_test.py
acceptance_tests/test_examples.py
acceptance_tests/test_args.py
```

Unit Testing

```
uni_test/test_building_blocks.py
  from modeling import TextCNN
  class TextCNNTester(unittest.TestCase):
    def prepare_config_args (self) ->
          SimpleNamespace:
       args = SimpleNamespace( ... )
       return args
uni_test/test_get_args.py
uni_test/test_output_shape.py
uni_test/test_param.py
```
